# AGENT - Activated GEnebank NeTwork

AGENT aims to unlock the full potential of the biological material stored in gene banks around the globe by introducing a new international standard and an open digital infrastructure for the management of plant genetic resources.

## OBJECTIVES

- a long-term network of actively cooperating gene banks and their conversion from passive seed repositories into active digital resource centres
- a new international standard for gene bank management
- a better integration of existing genetic material into modern breeding programmes, exemplified using barley and wheat
- the verification and systematic genotyping of plant genetic resources
